

AD Enclosure - MC6

Search and Secure Procedure

MC6
MC6.V1.0

- 1) "A" and "B" search the area upstream of the MC6 Target Pile and reset Interlock Box #1.
Note: It is essential to check sides, top, interior and around all apparatus whenever possible.
- 2) Verify that the Hatch to MB6 is locked with an OPS Lock. If not it will need to be checked. It is a Confine Space Area, you will need to get a third person, equipment and forms.
- 3) "A" and "B" proceed downstream searching the enclosure.
- 4) "A" holds at the entrance making sure no one enters the enclosure during the search.
- 5) "B" continues downstream searching the enclosure and resets Interlock Box #2.
- 6) "B" rejoins "A" and exits the enclosure and reset Interlock Box #3.
- 7) Note: If the catwalk area was opened "A" and "B" will need to verify the gates and doors are closed and locked.
